

Bray–Curtis | stress 0.119 (weak ties) / 0.2144 (tie-aware) | 42% of sample pairs share no taxa
UNRELIABLE ORDINATION – tie-aware stress 0.2144 exceeds 0.20; read the statistics, not this map

This NMDS plot displays three distinct clusters of data points in a two-dimensional space defined by NMDS1 (horizontal axis) and NMDS2 (vertical axis). The clusters are represented by different colors and dashed convex hulls:

- Blue Cluster:** Located on the left side of the plot, centered around NMDS1 = -1.0 and NMDS2 = 0.2. It contains approximately 12 data points and a centroid marked with a blue 'X'.
- Orange Cluster:** Located on the right side of the plot, centered around NMDS1 = 1.0 and NMDS2 = 0.2. It contains approximately 15 data points and a centroid marked with an orange 'X'.
- Purple Cluster:** Located in the lower-left region, centered around NMDS1 = -0.5 and NMDS2 = -0.4. It contains approximately 10 data points and a centroid marked with a purple 'X'.

The plot shows significant overlap between the clusters, particularly between the blue and orange clusters, suggesting some degree of similarity or shared variance between these groups. The purple cluster is more distinct from the other two.
